### **DETAILED ACTION**

Page 2

## Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 13 and 15 are indefinite because they fail to positively recite a step of cleaning the metal. The claims only recite a step of contacting the metal, which would not necessarily result in cleaning of the metal. Claims 2-3 are indefinite because it recites that the aqueous solution further comprises phosphonic acid, the limitations of which were previously recited in claim 1. Claim 13 is indefinite because it fails to positively recite hydrogen peroxide. Claims 14 and 16 are indefinite because it fails to recited diphosphonic acid. Claim 15 is indefinite because the surfactant is recited twice.

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-2, 4,8 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Brasch (4378270).

Art Unit: 1746

In reference to claims 1-2 and 12, Brash teaches a method of removing copper from a circuit board by contacting with an aqueous solution comprising hydrogen peroxide and 0.1-20% by weight phosphonic acid (col. 3, lines 25-30, col. 4, lines 17-20, col. 2, lines 35-40). In reference to claims 4-5, refer to col. 3, lines 10-15. In reference to claim 6, refer to the Example, and col. 4, line 34. In reference to claims 7-8, refer to col. 4, line 22.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 6. Claims 1 and 8-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Skee (6599370).

Skee teaches stabilized alkaline compositions for cleaning microelectronic substrates, the composition comprising a) a base, b) a stabilizing agent, hydrogen peroxide, c) 0.01-10% chelant (phosphonic acid), and d) surfactant (Abstract, col. 8, lines 53-57, col. 6, line 45). In reference to claim 6, refer to col. 7, line 39, col. 10, line 66. In reference to claims 8-9, refer to col. 45, lines 60-63, col. 8, lines 50-52. In reference to claims 10-11, refer to col. 9, lines 15-19. In reference to claim 12, refer to col. 48, claim 26.

Art Unit: 1746

# Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 8. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 10. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brasch (4378270).

Application/Control Number: 10/691,555

Art Unit: 1746

Brasch fails to teach 35-45% of phosphonic acids. However, it would have been within the level of the skilled artisan to adjust the concentration of phosphonic acid since Brasch teaches that higher concentrations can be used (col. 3, lines 25-30).

11. Claims 9, and 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brasch (4378270) in view of Schellinger Jr. (4401509).

Brasch teaches the invention substantially as claimed with the exception of the concentration of sulfuric acid. Schellinger teaches a composition for etching copper from circuit boards using sulfuric acid, hydrogen peroxide, and phosphonic acid. In col. 3, lines 3-5, Schellinger teaches 2-20% sulfuric acid. Schellinger further teaches that the concentration of sulfuric acid is not critical.

It would have been obvious to a person of ordinary skill in the art to have modified the method of Brasch to include adjusting the concentration of sulfuric acid to 2-20%, as taught by Schellinger, for purposes of etching copper from integrated circuit boards.

Brasch, as modified by Schellinger, fail to teach 35-50% of phosphonic acids. However, it would have been within the level of the skilled artisan to adjust the concentration of phosphonic acid since Brasch teaches that higher concentrations can be used (col. 3, lines 25-30). In reference to claim 14, refer to the teachings of Brasch.

12. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Skee (6599370) in view of Morinaga et al. (5885362).

Skee teaches using an alkaline solution. Skee teaches that any suitable base

Art Unit: 1746

may be used but fails to teach an alkali metal hydroxide. Morinaga et al. teach surface treatment (i.e. cleaning etching) using a composition comprising a base, surfactant, peroxide, and a chelant. In col. 12-13 bridging, Morinaga teaches forming an alkaline solution with bases which include ammonia, ammonium hydroxide, and alkali earth metal hydroxides. It would have been obvious to a skilled artisan to have modified the method of Skee to include equivalent bases, such as alkali metal hydroxides, as taught by Morinaga, for purposes of forming an alkaline solution.

13. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Skee (6599370) in view of Morinaga et al. (5885362) and further in view of Watts (4070422).

Skee fails to teach the specific phosphonic acid as recited in claim 16. Watts teaches various phosphonic acids for stabilization of hydrogen peroxide. Col. 3, lines 25-29, teaches hydroxyethylidene 1,1-diphosphonic acid is preferred because of its commercial availability.

It would have been obvious to a person of ordinary skill in the art to have modified the method of Skee to include hydroxyethylidene 1,1-diphosphonic acid, as taught by Watts, for the advantages of commercial availability of the reagent.

14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sakamoto et al. teach an electroplating process. Sugihara et al. teach a cleaning fluid for a semiconductor substrate. Zhang et al. teach a composition comprising a surfactant, chelant, hydrogen peroxide, and base. Winkley teaches stabilized hydrogen peroxide solutions. Hayashida et al. teach cleaning the surface.

15. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Sharidan Carrillo whose telephone number is 571-272-

1297. The examiner can normally be reached on Monday-Friday, 6:00a.m-2:30pm.

16. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Michael Barr can be reached on 571-272-1414. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
